AI MVP Blueprint: From Idea to a Testable Product

12 focused prompts, 6 editable worksheets, and a completed fictional example.

Start with one workflow

Open the offline workbench, choose the first worksheet and replace the fictional example. A useful first version starts with a trigger and ends with a concrete artifact. 'Help people become productive' is too broad; 'turn Friday lesson notes into an editable report' can be checked. The example in this package is fictional and does not claim use by real tutors.

Complete the six worksheets

Work through problem, alternatives, brief, flow, acceptance, and launch. Empty fields represent decisions still open. Export the text brief and the JSON backup. The workbench keeps edits in memory; reopening the file starts a new session. Keep the exported backup yourself and import it when you return.

01 / Define the problem

One user group
Independent tutors preparing weekly lesson reports

When the problem happens
After the final lesson each Friday

Current workaround
Copy notes into a document and manually check unfinished follow-ups

Observable outcome
Produce an editable report from synthetic lesson notes with a visible checklist

Explicitly outside the first version
No real student accounts, billing, or automatic messages
